Hydronic Heating Installation & Maintenance

The HVAC&R industry has been declared as a permitted industry which will see Hydrotherm Hydronic Heating able to continue to install and maintain our heating systems under the Victorian Government guidelines.

Earlier this month The Australian Institute of Refrigeration, Air Conditioning and Heating (AIRAH), had highlighted that within the government's permitted worker scheme, HVAC&R is clearly covered under the first category:

Ancillary and support businesses are able to open onsite to ensure the necessary production, supply, manufacture, repair, maintenance, cleaning, security, wholesale, distribution, transportation or sale of equipment, goods or services required for the operations of a Permitted Work Premises, or for Closed Work Premises where there are safety or environmental obligations.

Since then, there have been further updates to the Permitted Industries announced on Monday August 3rd:

Construction of critical and essential infrastructure and services to support these projects, and other construction in line with restrictions**What is considered to be construction of critical and essential infrastructure?**

Construction of critical and essential infrastructure is not subject to business operating reductions. It means: Construction or maintenance (including civil works and building activities) of critical and essential infrastructure that is urgently required for the purposes of sustaining human health, safety and wellbeing, regardless of whether those activities are privately or publicly funded.

If you have any concerns or questions regarding Hydrotherm Hydronic Heating carrying out any work at your home or work site, please contact me for further information.

Yours sincerely

Abe Williams
Managing Director
